GrailCrest™

Know the grade before you pay for it.

Bring a card to the table. We'll scan it and show you its grade estimate, the odds of each grade and what it's worth graded — in about a minute.

Centering lines and border widths read off the scan, with the grade estimate and what grading would add.

How it works

1. **Scan the card**
   Front and back on any flatbed scanner. No special lights or photo tricks.

2. **GrailCrest measures it**
   Centering to a tenth of a millimetre, every corner and edge, and the surface for scratches and print lines.

3. **See the grade and the odds**
   A PSA, Beckett or CGC estimate, with the chance of each grade and the reasons behind it.

4. **Decide if grading pays**
   What it sells for raw and at each grade, less every fee, so you send only the cards worth it.
